Rani Laxmibai Military School for girls

Kasar Amboli, Mulshi

Building designed to create an environment conducive to military training of girls and yet create a second home for them.

Use of composite masonry and sloping roofs is a conscious answer to the climatic and topographical conditions of the region. The landscape aims at creating an environment that accentuates the ambience of spaces created by the architectural design. The courtyards are covered with polycarbonate sheets protecting the corridors and courts from the heavy rainfall and ensure natural light penetration in the structure.

Use of natural material, natural light and ventilation help in making the user feels close to nature when inside the structure.

Architect	Ar. Hemant S. Mahajan / Ar. Prashant P. Shah - Group Phi Architects & Designers
